

Abstract of the Disclosure

A connector suitable for mounting to a solenoid or the like includes a contact holder adapted to receive and hold a plurality of contact assemblies. Each contact assembly includes a band of closed configuration and having a central opening for receiving the stripped end of a wire, and a contact adapted to couple to an associated contact of the solenoid. A screw is threadedly received in each band and adapted to force the contact into electrical engagement with the wire held within the opening of the band.
